PROFESSIONAL SUMMARY

Freelance full-stack developer with 6+ years of hands-on software development experience, focused on building practical, production-ready software products for startups, businesses, agencies, and entrepreneurs. Experienced across React Native mobile applications, React.js websites and web applications, Node.js backends, REST APIs, SaaS platforms, ERP-style systems, management platforms, e-commerce, booking, delivery, workforce, vendor, customer, and admin solutions.

I can take a project through the full development lifecycle — understanding requirements, breaking business workflows into features, planning application architecture, building responsive interfaces, developing APIs and database logic, integrating third-party services, testing, deployment, troubleshooting, and ongoing improvements. I am comfortable joining an existing project, building an MVP from an early idea, or taking ownership of an application through production delivery.

WHAT I BRING TO A CLIENT

1. End-to-end product development: frontend, mobile app, backend, database, API integration, deployment, and maintenance.
2. Business-focused development: convert real operational workflows into usable software rather than only implementing screens.
3. Role-based systems: build separate experiences and permissions for customers, vendors, employees, managers, organizers, administrators, and other user roles.
4. Scalable project structure: reusable components, modular APIs, maintainable code, validation, authentication, authorization, and organized business logic.
5. Client collaboration: clarify requirements, identify missing workflows, discuss practical solutions, estimate work, communicate progress, and deliver iteratively.
6. Production mindset: focus on performance, reliability, responsive UI, error handling, testing, deployment, monitoring, and post-launch support.

CORE TECHNICAL EXPERTISE

React Native

Android & iOS applications, navigation, forms, API integration, authentication, notifications, maps, payments, reusable components, responsive layouts, role-based mobile experiences, production builds.

React.js / Next.js

Dynamic websites, dashboards, customer portals, management systems, marketplace interfaces, responsive business applications, reusable UI components, state management, API-driven pages.

Node.js / Express.js

REST API development, authentication, authorization, business logic, validation, file handling, integrations, admin services, role-based access, backend architecture.

JavaScript / TypeScript

Modern application logic, reusable utilities, typed interfaces, async workflows, API handling, maintainable frontend and backend development.

Databases

MongoDB, MySQL, PostgreSQL, Firebase and Supabase concepts including schemas, CRUD operations, relationships, queries, business data, reporting, and application integration.

Cloud & Services

AWS, S3, EC2, Lambda, Firebase, push notifications, cloud storage, deployment support, environment configuration, and third-party service integration.

UI & Development Tools

HTML5, CSS3, SCSS, Bootstrap, Tailwind CSS, Redux, Figma, Postman, Git, GitHub, Axios, responsive UI and API testing.

Integrations

REST APIs, payment gateways, maps, notifications,

authentication providers, external business services, and other third-party APIs.

FREELANCE EXPERIENCE

Freelance Full-Stack Developer | Self-Employed · Remote | Mar 2020 – Present | 6+ Years

1. Partner with clients on mobile, web, backend, SaaS, e-commerce, management, booking, workforce, vendor, and custom software projects.
2. Develop Android and iOS applications using React Native, with business workflows, authentication, API integration, notifications, payments, maps, dashboards, and role-specific experiences.
3. Build dynamic websites and web applications using React.js/Next.js, including customer-facing websites, business portals, dashboards, vendor panels, admin panels, booking interfaces, and management systems.
4. Develop Node.js and Express.js REST APIs for authentication, users, roles, permissions, products, orders, bookings, payments, reports, notifications, and other business workflows.
5. Design role-based systems where different users see different features, actions, dashboards, records, and permissions according to their responsibilities.
6. Build ERP-style and management applications around operational workflows such as workforce management, vendor management, event operations, customer management, inventory, orders, bookings, reporting, and administration.
7. Develop e-commerce solutions covering product catalogs, search and filtering, cart, checkout, orders, customer accounts, vendor workflows, payments, and administration.
8. Support booking and service platforms for events, accommodation, appointments, home services, and other scheduling-driven businesses.
9. Build delivery-oriented applications and workflows involving customers, service providers, vendors, order status, operational tracking, and management interfaces where required by the project.
10. Integrate third-party services such as payment systems, maps, Firebase services, push notifications, cloud storage, analytics, and external APIs.
11. Handle application maintenance and improvement work, including bug fixing, UI improvements, API changes, performance tuning, new features, refactoring, and production support.

BUSINESS DOMAINS & PROJECT EXPERIENCE

ERP & Business Management — Experience building ERP-style workflows and business management software where multiple teams use shared data and different permissions. Typical areas include users, employees, vendors, products, orders, reports, approvals, dashboards, and operational workflows.

Event Management — Event-focused applications and management platforms covering event discovery, registration or booking, attendee operations, ticketing, organizer workflows, announcements, speakers, staff roles, and administrative controls.

Workforce & Productivity — Workforce management solutions involving employee attendance, productivity, sales or product information, reports, team access, role-based permissions, and operational dashboards.

Vendor & Seller Panels — Vendor-facing systems for product or service management, inventory, orders, pricing, availability, customer requests, business dashboards, and role-specific access.

Admin Panels & Dashboards — Centralized admin interfaces for managing users, content, products, orders, bookings, vendors, reports, permissions, configurations, and platform operations.

E-commerce — Customer and vendor e-commerce applications with catalogs, categories, search, filters, cart, checkout, payments, orders, user accounts, vendor workflows, and admin management.

Delivery Applications — Application workflows for customer orders, delivery or service operations, status updates, user roles, order management, notifications, and operational dashboards.

Booking & Service Platforms — Booking systems for events, accommodation, appointments, beauty or home services, and other businesses requiring availability, scheduling, customer accounts, and management workflows.

Dynamic Websites & Portals — Database-driven websites and portals where content, listings, products, services, users, and business information are dynamically managed through APIs and admin interfaces.

SaaS & Custom Software — Multi-user software products with subscriptions or business workflows, dashboards, permissions, integrations, and custom functionality built around a specific client requirement.

SELECTED PROJECT CAPABILITIES

Role-Based Access Control (RBAC)

Build applications with multiple user roles and permission levels, including customer, vendor, employee, manager, organizer, staff, and administrator. Implement role-specific navigation, actions, dashboards, records, and API authorization.

Admin & Management Systems

Create centralized panels for operational control: user management, product/service management, orders, bookings, content, vendors, reports, settings, permissions, and platform configuration.

E-commerce & Marketplace

Develop customer journeys from product discovery through cart, checkout, payment, order management, and account features, together with vendor and admin workflows.

Mobile + Web Ecosystems

Connect React Native apps with React.js web portals and Node.js APIs so customers, staff, vendors, and administrators can work on the same business platform.

API & Third-Party Integration

Develop and consume REST APIs and connect payments, maps, Firebase, notifications, cloud services, and external business systems.

SEO-Friendly Web Development

Build structured, responsive, content-driven web pages with attention to semantic HTML, page structure, performance, metadata-ready architecture, clean URLs, mobile responsiveness, and integration with SEO requirements supplied by the business.

Performance & Reliability

Improve application responsiveness through reusable components, efficient API calls, sensible state management, database-aware queries, validation, error handling, and production troubleshooting.

DEVELOPMENT PROCESS

01 — Discovery Understand the business, users, goals, existing system, required features, integrations, and delivery priorities.

02 — Planning & Architecture Break the requirement into modules, user roles, screens, APIs, database entities, permissions, integrations, and milestones.

03 — UI & Development Build responsive mobile/web interfaces and backend services with reusable components, clean code, validation, and business logic.

04 — Integration & Testing Connect APIs and third-party services, test workflows and role permissions, fix bugs, and validate real user journeys.

05 — Deployment Prepare production builds, configure servers/services, support app releases, and deploy web/backend components.

06 — Maintenance Monitor issues, improve performance, add new features, fix bugs, and continue development as the business evolves.

FREELANCE SERVICES

1. React Native Mobile App Development — Android & iOS
2. React.js / Next.js Web Application Development
3. Node.js Backend & REST API Development
4. Full-Stack Product Development
5. SaaS & MVP Development
6. ERP, CRM & Business Management Software
7. E-commerce & Marketplace Development
8. Admin Dashboard & Vendor Panel Development
9. Booking, Event & Workforce Management Applications
10. API, Payment, Maps, Firebase & Third-Party Integrations
11. Application Maintenance, Bug Fixing & Feature Development
12. SEO-Friendly Dynamic Website Development

TECHNICAL TOOLKIT

Frontend & Mobile: React Native, React.js, Next.js, Expo, Redux, JavaScript, TypeScript, HTML5, CSS3, SCSS, Bootstrap, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, GraphQL, Authentication, Authorization, RBAC

Databases: MongoDB, MySQL, PostgreSQL, Firebase, Supabase

Cloud & Services: AWS, S3, EC2, AWS Lambda, Firebase, Push Notifications

Payments & Integrations: Payment gateways, Google Maps, external REST APIs, third-party services

Tools: Git, GitHub, Postman, Figma, Axios, Android Studio, Xcode

PROFESSIONAL AVAILABILITY

Available for remote freelance projects, contract development, startup MVPs, existing product improvements, long-term development partnerships, and dedicated feature work with clients in the US, UK, and other international markets.

Best fit: founders, small businesses, agencies, and product teams looking for a developer who can understand the business requirement, build the product end-to-end, communicate clearly, and stay involved after launch.

LET'S BUILD SOMETHING GREAT.
